COLORADO AND GILA VALLEYS.

In the valleys of the Colorado and Gila rivers there is room for thousands. It is not too much to say that nowhere within the limits of this broad union can be found a more desirable region for the making of a home. No laborious clearing of the land is required. It is almost ready for the plow. Trees and shrubbery have so rapid a growth that within eighteen months the immigrant can surround his abode with attractive which would require years to mature in less favored climates. Fruits ripen and are ready for the market a full month before the California products. The bright sunshine makes life a luxury, and the pure dry atmosphere brings health to all who inhale it. For the establishment of colonies, such as are made in Southern California, of almost presents unparalleled opportunities. Thousands of acres now profitless can be made productive by the construction of irrigating ditches, and there is no investment which assures larger and more permanent returns.

The statements in this article on Yuma county are not exaggerated; in fact they fall short of the truth. Just to this wonderful bit of country pineapples, dates, almonds and walnuts will do well. Strawberries, raspberries, blackberries, currants, gooseberries and various kinds of small fruits can be successfully cultivated. Indeed, Yuma county is not only the natural home of the citrus and semi-citrus fruits, as almost every fruit, nut, plant, grain, grass, or vegetable which can be produced in either tropic or temperate zones will thrive in the rich and fertile soils.

With the bright prospects ahead of the town of Yuma and Yuma county there can be no better investment for capital seeking large and remunerative returns than in California. The climate is a matchless one, where all forms of disease known to the damp and malarious regions of the east and north are unknown, where the bright sunshine brings life to bloom and fragrance to every form of vegetation, and where the clear days and cool balmy nights are one long continued poem of happiness and delight, we offer to capitalists and investors a veritable paradise in which to settle.

The soil of these valleys is among the richest on the continent. It is formed of the detritus which the streams for ages have brought down from their mountain homes in their journey to the sea. By constant overflows and change of channel the soil is renewed, and the fertility of the soil is maintained. The soil is a rich and fertile one, and the productive capacity of these valleys is not surpassed by lands of equal area in any part of the United States. So rapid and profitable is the growth of the fruits, cereals and vegetables that the laborer can be successful in the production of the minimum. In nearly all of them two crops a year can be grown, and vegetation is in its prime in the month of January. The farmer plants a cottonwood sapling before his door, and within the year he has a shade tree twenty feet high. Alfalfa can be cut six times during the season, and it is an actual fact that grape cuttings, have produced within eighteen months what state or territory can make such a showing. The climate, it must be remembered, is never perpetually sunny. There are never fogs in these southern valleys. The farmer begins to plant in November, and by the middle of May his harvest is reaped. Roses are in bloom, fruit trees are blooming, and the grain fields are a sea of green, when the fields of the Eastern farmer are covered with snow and ice.

Every variety of grains, grasses, fruits and vegetables grown in semitropical zones can be produced in the valleys of Arizona. Wheat, corn, barley, oats and all the cereals give a yield of from twenty-five to fifty bushels per acre. Alfalfa, timothy, clover, Bermuda and all the cultivated grasses grow luxuriantly. The former giving from eight to ten tons to the acre each year. Every variety of vegetable raised in the United States can be grown in Arizona, and nowhere are they found of better quality.

Besides the products mentioned, these semitropical valleys produce cotton, sugar cane, tobacco, hemp and rice. With the exception of the sugarcane, but little cotton is raised in the cultivation of the other staples; but it has been demonstrated that the soil and climate are especially adapted to their successful growth. Cotton-cropping is no experiment in Arizona, for it is on record that when the Europeans first penetrated this region, four for the Pima Indians wearing fabrics made of cotton grown in the Gila valley.

But it is their adaptability for fruit culture that assures to these valleys lands a dense population and a prosperous future. Almost every variety known can be raised in their fruitful soils. The apple, pear, plum, peach, apricot, quince and nectarine are of successful growth, and give a generous yield. The grape of all varieties is at home in the sunny valleys. No place in the country growing better of the Pacific coast can show so prolific a yield. The quality is all that could be desired, and the wine, although its manufacture is yet experimental, is of a fine flavor, delicious bouquet, and unsurpassed by any native product as a table beverage. Experiments with the raisin grape have shown that this climate and soil possess every advantage for the production and curing of this staple article of commerce.

Besides the fruits already mentioned, the orange, lemon, lime olive, fig, the pomegranate and others of the citrus family, can be grown successfully in the valleys of Southern Arizona. Orange trees are now in bearing in Salt River valley and at Yuma; while the banana is also planted in the Gila valley. The Arizona orange in quality and flavor will compare favorably with the best California.

In the valleys of the Colorado, the Salt and the Gila rivers, there is room for thousands. It is not too much to say that nowhere within the limits of this broad union can be found a more desirable region for the making of a home. No laborious clearing of the land is required. It is almost ready for the plow. Trees and shrubbery have so rapid a growth that within eighteen months the immigrant can surround his abode with attractive which would require years to mature in less favored climates. Fruits ripen and are ready for the market a full month before the California products. The bright sunshine is a luxury, and the pure, dry atmosphere brings life to bloom and fragrance to every form of vegetation, and where the clear days and cool balmy nights are one long continued poem of happiness and delight, we offer to capitalists and investors a veritable paradise in which to settle.

The statements in this article on Yuma county are not exaggerated; in fact they fall short of the truth. Just to this wonderful bit of country pineapples, dates, almonds and walnuts will do well. Strawberries, raspberries, blackberries, currants, gooseberries and various kinds of small fruits can be successfully cultivated. Indeed, Yuma county is not only the natural home of the citrus and semi-citrus fruits, as almost every fruit, nut, plant, grain, grass, or vegetable which can be produced in either tropic or temperate zones will thrive in the rich and fertile soils.

With the bright prospects ahead of the town of Yuma and Yuma county there can be no better investment for capital seeking large and remunerative returns than in California. The climate is a matchless one, where all forms of disease known to the damp and malarious regions of the east and north are unknown, where the bright sunshine brings life to bloom and fragrance to every form of vegetation, and where the clear days and cool balmy nights are one long continued poem of happiness and delight, we offer to capitalists and investors a veritable paradise in which to settle.
